

Codian Management Platform Director

Real Time, Large Scale, Video Conference Control and Monitoring

Provision, Control and Monitor Numerous Conferences across Multiple MCUs with Simplicity

As part of the Codian Management Platform suite of applications, Codian Director is a unique application, specifically designed to allow simple and scalable creation, control and monitoring of video conferences across Codian's complete family of conference bridges.

With support for Codian's industry leading MCU 4500, MCU 4200 and MSE 8000 Series, the Codian Director is ideal for enterprises, service providers and organisations that run simultaneous conferences across a number of conference units.

The real-time interface is intuitive and if required, may be used concurrently by multiple conference administrators to manage multiple conferences.

The Codian Director offers complementary management capabilities to the Codian Scheduler and the Codian Management Web Interface.

With Codian's management solutions you can conduct business better every day.

The Codian Difference

Intuitive User Interface

The easy-to-use interface allows for minimal training and a greater range of staff to simultaneously set-up video conferences with even greater accuracy.

Real-Time View

Spot and resolve any problems instantaneously. Handle users in real-time, ensuring that they receive a superior experience.

Multiple Conference Management

Manage numerous conferences with ease, with total control over allocation of resources and conference settings, allowing more efficient conference administration.

Multiple Device Management

Increase confidence and save time when provisioning more complicated video conferences across many MCUs, allowing better utilisation of your video conferencing infrastructure.

Simultaneous Multiple Administrators

The task of managing conferences across many MCUs can now be shared by multiple administrators, whilst avoiding resource availability conflicts.

Template Based Provisioning

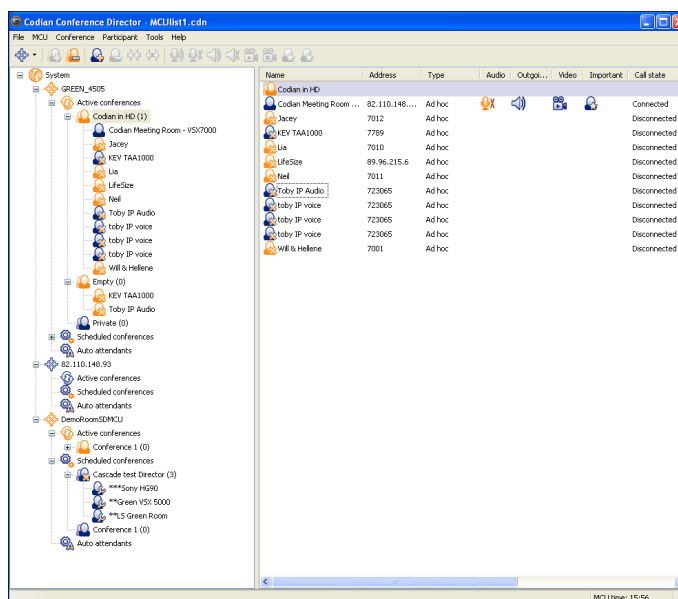

By sharing templates and template lists between conference administrators, the set-up of video conferences can be semi-automated, reducing errors and speeding up the provisioning process.

Address Book Capability

Use of a shared address book allows administrators to quickly identify and connect endpoints, without the need to obtain endpoint information more than once.

Troubleshooting Facilities

Receive warnings and alerts based on configurable parameters, allowing differentiated service levels for the most important conferences.
